

Resume Builder:
Components:

The diagram illustrates the layout of a resume builder application. It is organized into several distinct sections within a light blue container:

- Header Section:** Contains an oval placeholder labeled "Img" on the left. To its right is a horizontal bar with three labels: "Name:", "Location:", and "About:".
- Skills Section:** A rectangular box labeled "Skills:".
- Work Experience Section:** A rectangular box labeled "Work Experience:".
- Projects Section:** A larger rectangular box labeled "Projects:" at the top left. Inside this box are three identical rounded rectangular components. Each component contains the text "Img of Proj Details" and "Languages used:".
- Contact Details Section:** A rectangular box at the bottom labeled "Contact Details:".

Making resume editable:

1. Every component should have an edit button which when clicked will prompt a form which will have the respective fields. When these fields are altered then react will take this as input and corresponding changes are displayed on the final resume.
2. Currently all the component props are hard coded in app.js file.
